

End-to-end product designer who moves fluidly from stakeholder interviews and business analysis through to UI systems and developer handoff. Proven track record across complex IoT ecosystems, SaaS B2B platforms, and multi-brand management dashboards. Leverages AI tooling (Claude, Gemini CLI) to compress the design-to-production cycle significantly.

WHAT I BRING TO THE TABLE

End-to-end ownership

I don't just ship screens — I own the full arc from discovery and BA through to production handoff. Comfortable bridging business requirements and technical constraints in the same conversation.

AI-accelerated workflow

I actively use Claude for BA and Gemini CLI for frontend prototyping, cutting the design-to-production loop from weeks to days — without sacrificing quality or spec rigour.

Platform thinking

I build for scale: whitelabel UI systems that adapt to each partner's brand, reusable role-based UX patterns — architecture that serves a platform, not just a single product.

Field research

I run contextual inquiry on-site — including factory floor visits for IoT hardware — so design decisions are grounded in observed behaviour, not assumed workflows.

WORK EXPERIENCE

Rogo Solutions

Jul 2024 – Present

UI/UX Product Designer

- Designed an IoT & SaaS ecosystem end-to-end — lo-fi → wireframe → hi-fi → design token → developer handoff — across 3+ flagship products within a single platform.
- Led stakeholder interviews and BA sessions directly with clients and partner BAs, translating business requirements into UX specs tied to actual API flows.
- Built a whitelabel UI system that adapts brand identity (logo, colour, favicon, component theming) per partner; architected multi-level role-based UX (admin / operator / partner / user).
- Shipped UI code using Gemini CLI and deployed via Vercel, reducing the design → production cycle significantly.

Think & Action Agency

Aug 2023 – Oct 2024

Web & Graphic Designer

- Designed websites, landing pages, and visual campaigns for B2B clients in finance and real estate.
- Delivered brand and visual communication for VietinBank Securities (CTS) and VietcomBank Securities (VCBS): campaign key visuals, event materials.
- Built a component system and UX layout for an internal ZNS web dashboard; worked directly with account managers and clients to gather requirements and hit deadlines.

FPT Software – DES Department

2022

Part-time Design Intern

- Supported the internal design team with UI mockups, assets, and handoff documentation for enterprise software projects.
- Gained hands-on experience with Agile workflows and cross-functional collaboration with engineering teams.

WHAT'S NEXT

- **Near-term:** Deepen the RaIO ecosystem and unify the Kangaroo partner experience within a single multi-brand platform dashboard.
- **Long-term:** Step into a Lead UX / Product Designer role within a remote-first B2B product team — and build a design system at enterprise scale.

RaIO Smart — Smart Home App (Whitelabel) IoT Smart home

UI/UX Designer · 2025 – Present · Rogo Solutions

A whitelabel smart home app that onboards partners (Rang Dong and others) into Rogo's IoT ecosystem. Built on an internal SDK; every partner gets a fully branded experience with zero forking.

- Ran initial BA, then carried the design from wireframe through hi-fi to developer handoff — iterating continuously with partner feedback.
- Collaborated directly with clients' engineering teams to ensure handoff specs matched real API contracts.

Rogo IoT Platform Dashboard — Multibrand Management SaaS B2B Dashboard

Designer + AI-assisted Developer · 2025 · Rogo Solutions

A web dashboard managing the entire Rogo ecosystem: partners, organisations, products, projects, and multi-level permissions. Whitelabelled per partner. I also built and deployed the frontend — BA via Claude, code via Gemini CLI, hosted on Vercel.

- Ran three-way collaboration between engineering, BA, and the Kangaroo client — ensuring UX specs mapped directly to API behaviour.
- Designed a whitelabel UI system (logo, colour, favicon, component theming) and multi-level role-based access (admin / operator / partner / user).
- Handled complex-state UX: device onboarding (Wi-Fi / BLE), real-time monitoring, automation control, and graceful error / fallback flows.

Partner Production App IoT Desktop

UI/UX Designer · 2025 · Rogo Solutions

A desktop app replacing a legacy tablet system for IoT manufacturing and distribution partners. Covers the full device lifecycle: firmware flashing → line testing → warehousing → OTA → warranty.

- Conducted on-site field research at the IoT factory — contextual inquiry with line workers — before touching a single frame.
- Designed multi-state flows for each lifecycle stage, optimised for speed and accuracy on the production floor.

Austfly Roller Shutter Control — App Redesign IoT Branding

UI/UX Designer · 2025 · Portfolio

End-to-end redesign of a smart roller shutter control app — from UX audit of the existing system through to a polished hi-fi prototype — with a focus on real-world IoT device interaction.

- Audited the full existing system, identified pain points by user segment, and redesigned control and onboarding flows; built a consistent design system from scratch.
- Outcome: leaner interface, fewer steps per interaction, comfortable for one-handed use — consumer IoT UX done right.
